Council Report

April 1 2019

- So far this spring we've had 8 water breaks.
- Aprox. 15 water line freeze ups, we were able to thaw 8, and needed to run garden hose to the neighbours to connect water.
- Spring thaw is going well, all culverts are thawed out.
- Day to day operations are going well.
- In the water plant we are experiencing higher turbidity and iron levels than normal. It has come to our attention that 58 3rd St. SW. has had discolored water for a month, What are council's thoughts on resolving this issue? We have flushed and changed the water meter at this residents address.
- With spring around the corner we are getting ready to do our by annual water main flushing and our spring lagoon discharge.
